

Press Release

Believing in Document Logistics

"What's wrong with those printers, jamming again!? Are the delivery orders ready!? Quick! Or the trucks will be delayed again! We're wasting time and money. I'm fed up with it!"

Does this sound familiar?

This is only just an example and yet it happens everyday! **Print and document logistics issues have heavy consequences: trucks can't leave and are delayed**, and at the other end unhappy **customers are waiting to be delivered...**

At the end of the day, everyone is stressed out and the company loses money and is less profitable!

Sooner or later, every company at any level is facing supply chain issues.

In this context, and because **document logistics** is becoming an increasingly **strategic challenge**, **MAPPING** has developed a high-performance, comprehensive and user-dedicated software suite.

With **MAPPING Suite**, you can *create, remap, and print* to any printer, automatically *archive* any type of document, and then *preview* them locally or remotely in a Web browser and also *email* and *fax* them. And the latest trend is electronic invoices!

For further information, feel free to call us on +33 359 560 115.
