

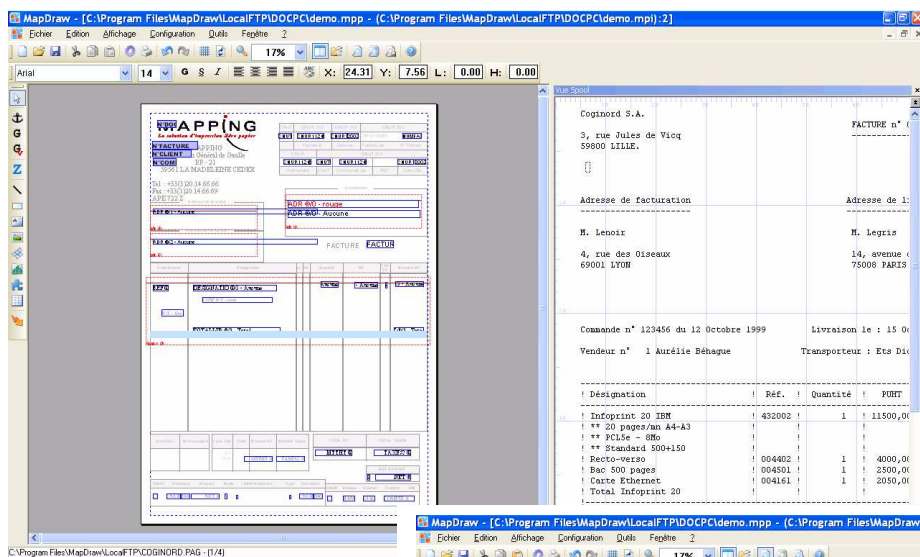

MAPPING MAPDRAW : Overlay / Remapping

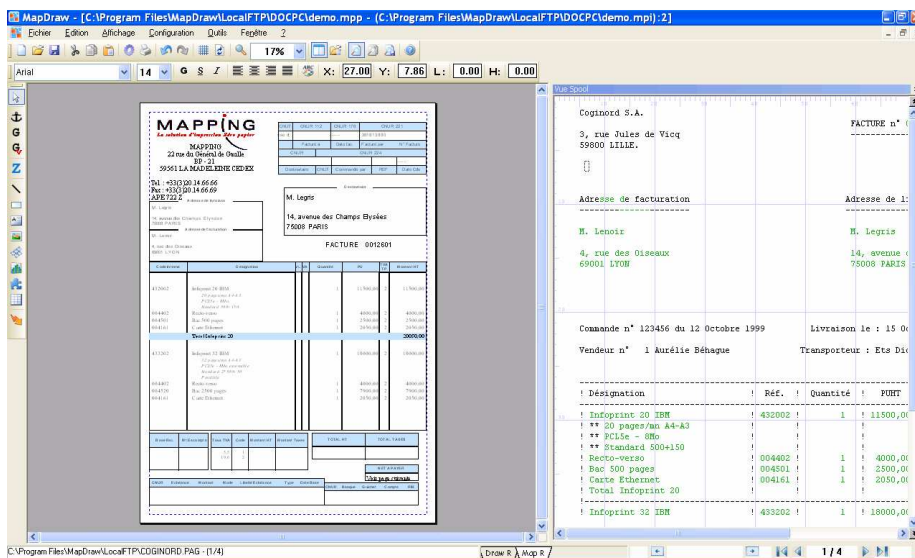

MAPPING is a spool file **indexing** and **remapping** software package, including powerful template design functions and support for True Type fonts. **MAPPING** is the server-side module that runs on the **production platform** (iSeries, Unix, Linux or Windows).

MAPDRAW installs on Windows-based workstations and allows you to **enhance the look of your spool files in a simple and powerful graphical environment**.

MAPDRAW makes it easy to define indexing criteria for archiving records in **MAPOUT**. **MAPDRAW** verifies the records data mapping and indexing before putting them into production. The document templates are then made available on the **MAPPING** server in the selected environment (iSeries, Unix, Linux or Windows). Once on the server, **MAPPING** **processes the print jobs** while applying the new formatting and directs the resulting documents to a printer and/or the archival module **MAPOUT**.

Sample MAPDRAW screen captures including template layout and print preview result

Main product features for MAPPING

- Support for all graphical objects
- Wizard-driven table generator
- Support for all Windows fonts
- Support for bar codes (1D and 2D) (1)
- Numeric conversion
- Drag & Drop data directly from your spool files
- Conditional logic over any object
- Support for label plates
- Support for graphs (pie, bar and line charts) (1)
- Support for calculations
- Support for dynamic images (link to logo and signature files...)
- Print to PCL, IPDS (1), PDF* (1) and thermal (1) printers
- Color-printing
- Printer bins management
- Interfaces with databases
- Support for all page sizes
- Duplex mode
- Support for multicopies
- Split and join spool files (1)
- Mailmerge functionality (1)
- Simple and fast implementation using the MAPPING robot
- Exceptionally fast processing times
- Spool file backup and restore options

MAPPING options

SORTING/JOINING/SPLITTING: Sort, split or join print files using one or more page criteria.

BARCODE: Use bar code fonts and encoding. This option makes it unnecessary to install bar code fonts on PCL laser printers.

AFPDS: Remap and print your files to any IPDS printer.

THERMAL: Remap and print your files to thermal printers (IBM, IGP, DATAMAX, ZEBRA, TEC, INTERMEC, F+D, ELTRON).

PDF: Remap your print files automatically from the production server (Unix, Linux, iSeries-AS400 or Windows).

SAPGOF connector: Process SAPGOF files as input to then direct them to MAPPING/MAPDRAW

UNICODE: Process your spool files in any code page.
