

MAPREPORT : Report generator

MAPREPORT

MAPREPORT helps you design print files from raw data or databases. It is comprised of a report building application on the PC and a generation engine on the production platform (iSeries, Unix, Linux, Windows).

Main product features for MAPREPORT

- Support for DB2, Oracle and SQL databases
- Easily position print fields using the mouse
- Support for execution scripts (logical links between files ...)
- Advanced page break management
- Conditional logic over fields
- Support for calculations
- Support for text areas
- Support for SQL sequences
- Instant print preview
- Put into production directly on system i or p platforms

The screenshot displays the MAPREPORT software interface. On the left, a tree view shows the database structure with tables like LISTFACT, CLIENT, FACTURE, and PRODUIT. The main workspace contains several data tables with columns for 'T.', 'Key', 'Name', and 'Description'. These tables are interconnected with arrows, indicating data flow. At the bottom left, an 'ACTIONS' panel lists various operations such as 'CALCUL DB.PAGE = &PAGEC', 'IF DB.NUMFACT = ""', 'VRAI', 'CALCUL DB.NUMFACT', 'FAUX', 'EXECUTE LISTFACT', 'SUCCESS', and 'ENDPAGE'. The bottom right section shows a preview of the generated report, which includes a header with 'CLIENT Adresse', a main table with columns 'LIGNE', 'IDPRODUIT', 'QTE', 'NAME', 'UNITPX', and 'MONTANT', and a footer with 'Total', 'TOTALFAC', and 'TOTALTTC'.
