

MAPWEB : Web publishing

MAPWEB

MAPWEB publishes archival records to the Web and makes them available in a Web browser **for both local and remote users** provided they have a userid and password.

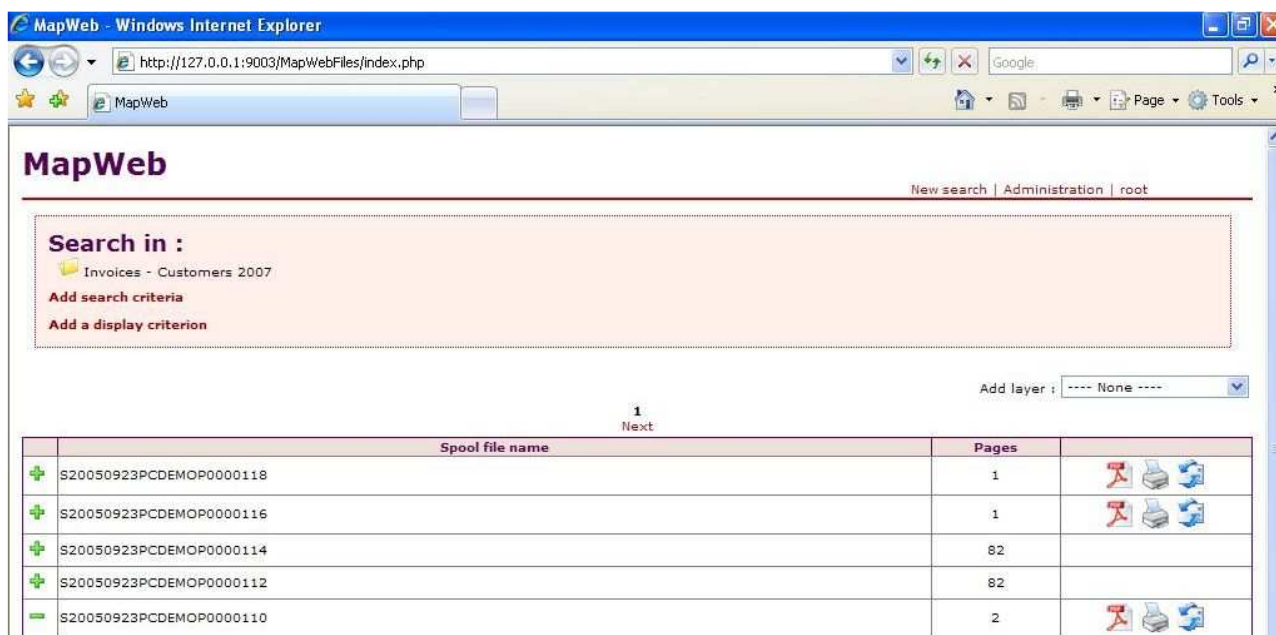

The **MAPWEB** standard license includes one user. Of course, it is possible to increase that number to add more concurrent users looking up archival records at the same time.

Main product features for MAPWEB

- Consult MAPOUT archival records in a Web browser
- Web administration tool included
- Set up secure user profiles with personalized permissions for looking up records
- Individual directory access settings for every user profile
- Individual search settings for every user
- PDF preview
- Document reprint
- Email archival records
- Support for watermarks (duplicate, certified copy ...)
- Multi-criteria searches
- Sub-searches (narrow down your search using previous search results)
- The elements displayed can be entirely customized (directory names, criteria...)
- The whole interface can be entirely customized to match your graphical charter (logos...)
- Use of Apache Web server or IIS for managing user permissions
- Use of MySQL or Oracle for managing archival databases
